INVISIO Headsets announces the world's first digital Bone Conduction headset system with hearing protection

- INVISIO Headsets today announces a new line of headsets for professional users at the EUROSATORY 2008 Exhibition in Paris
- The new product line includes the INVISIO® X50 – the world's first Bone Conduction headset system with hearing protection
- The headsets in the new product line will be available during the third quarter of 2008 and onwards

At the EUROSATORY Exhibition, which is held in Paris this week, INVISIO Headsets today announces its new line of headsets and headset systems for professional users. The range includes the INVISIO® X50 – the world's first digital Bone Conduction headset system with hearing protection. The company expects the new range of products to be commercially available during the third quarter of 2008 and onwards.

Lars Højgård Hansen, CEO at INVISIO Headsets, comments:

"This is another important milestone in the history of INVISIO Headsets. In addition to the Motorola relationship announced earlier this year, our focus is now on expanding our business area concerning headsets for professional users. With the announcement today we continue to build on the strong market position that INVISIO® has obtained during the past many years among the worlds most demanding users. We today announce a new range of products that is among the most advanced in-ear headsets the world has ever seen. The range is based on our patented technologies around Bone Conduction and we are extremely proud to announce the world's first digital Bone Conduction headset system with hearing protection. The changing demands in the market that includes increased preferences for in-ear solutions, digital solutions and headsets with hearing protection is fully addressed with our new product line"

Mark Orton, Sr. Product Manager at INVISIO Headsets, continues:

"Our new product line is built on a common platform which makes it both flexible and cost effective. We now have a large variety of headset solutions to suit the needs of the many different user groups that we cater for. From digital dual headset solutions for the Special Forces and general military to single analogue headsets for users within fire & rescue services, police and heavy industry. The addition of hearing protection as an option with our headsets is a great advancement and a response to the needs of users who operate in very high noise environments. We even have a submersible headset that can be used by divers for underwater communication down to 20 meters"

The new product line will, among others, include the following headsets and headset systems:

INVISIO® X-series headset and PTT control box:

INVISIO® X50 - The world's first digital Bone Conduction headset system with hearing protection.

Key features include:

Dual in-ear headset with the option of hearing protection

Dual Radio Support, Full-Duplex and VOX

Radio Auto-Sensing

INVISIO® M-series headsets:

INVISIO® M3 - In-ear tactical Bone Conduction headset for use in extreme environments. Hearing protection can be added as an option.

INVISIO® M3s – Submersible headset for underwater communication down to 20 meters.

About INVISIO® Bone conduction technology:

The INVISIO® technology is based on an earplug (10–12 mm) intended to be fastened in the outer ear. This earplug contains both a speaker and a microphone. Speech sound is transferred via the users jawbone and screens out airborne audio signals, which ensures a direct transfer of the users voice despite other external ambient sound. When people talk, speech vibrations are generated in the throat and vocal cords. These vibrations are transferred through bone and tissue. This especially applies to the jawbone, which passes near the front part of the outer ear, produces a strong transfer and transfers a broader spectrum of sound than if the signal were generated from the throat.

The technology is particularly superior for communication in very noisy and difficult sound environments.
