INVISIO Headsets unique technology is mentioned in very positive review of Motorola Endeavor HX-1 headset

The collaboration between INVISIO Headsets and Motorola is now starting to show results. Motorola has launched the first headset, Motorola HX-1, featuring INVISIO's patented bone conduction technology for reduction of ambient noise.

Engadget, the American web site known for reviewing consumer electronics and accessories, calls the new Motorola headset "the best Bluetooth headset they have ever tried". Specifically, the ability to activate bone conduction technology with the push of a button is highlighted as a great competitive advantage, thanks to the INVISIO technology (former Nextlink).

Lars Højgård Hansen, CEO at INVISIO Headsets AB (publ), comments:

Positive reviews by independent and industry leading magazines are important because they attribute credibility to new products, so it is exciting for INVISIO to be featured by such a reputable site like Engadget. With the growing consumer Bluetooth headset market currently at 100 million units per year and Motorola as the category leader, INVISIO is thrilled with the opportunity to bring our unique technology to an entirely new audience who wants to hear and be heard in even the fiercest wind and noise conditions.
